RESEARCH EXPERIENCE

- **Resource Scheduling for Multimodal LLM** University of Michigan
Studying efficient resource scheduling for large scale multimodal large language model (MLLM). Mar 2024 – Present
- **Fault Tolerant Distributed Training** University of Michigan
Studied efficient fault tolerance in large scale distributed training. Implemented Oobleck, a distributed training framework with pre-generated pipeline templates that can recover from failures fast by quickly reinstantiating a pipeline, instead of fully restarting the entire job. Oobleck has been published to SOSP’23. Sep 2021 – Present
- **Offloading Replicated Storage Transactions to RDMA NIC** KAIST
Reimplemented Hyperloop to use it as a baseline of LineFS, which offloads replicated transaction into Infiniband RDMA adaptors. Studied Infiniband RDMA architecture and witnessed the benefits of offloading in reducing host CPU overload. LineFS paper has been published to SOSP’21 and won the best paper award. Jan 2020 – Jul 2020
- **Architectural Support for Trusted Heterogeneous Execution** KAIST
Designed a HW-SW codesigned architecture for GPU trusted execution environment. To realize it, studied the PCIe interconnect architecture and Intel SGX architecture. It focuses on providing protection in the path between the GPU and the CPU to support commodity GPUs for practicality. HIX paper has been published to ASPLOS’19. Mar 2016 – Feb 2018
